

IBM MENTORSHIP PROGRAMME

This is to remind the University Community that a Mentorship Programme called “**MAKOCHA**” has been designed by **IBM**, South Africa for all staff, postgraduate and undergraduate students from selected University across Africa.

The programme “**MAKOCHA**” in Swahili language means **COACH**, and Lagos State University has been chosen as one of the Africa universities to benefit from this great initiative by **IBM**. Interested students are advised to go to:

http://domino.research.ibm.com/comm/www_innovate.nsf/pages/world.gio3.mako_chamindsmentor.html or contact Raul Bonegio at raulbon@za.ibm.com, for further information about the programme.

However, in June 2007, IBM had a very successful **GLOBAL INNOVATION OUTLOOK** in Nairobi, at which University students from across Africa were invited to participant. As a result of this programme, **IBM** has again seen the need for counseling and coaching students for better understanding on how to develop and apply their skills locally and globally.

In addition, postgraduate students and undergraduate students in **Computer Science and Engineering, from 300 level and above** that are interested in developing their IT skills, can also visit the website to be part of this **IBM MENTORSHIP PROGRAMME**.

Interested staff and students should please send the following information to the SAR (Information & Public Relation Unit).
